Art Unit: 1625

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-3 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claimed process comprises a 3 step recycle process for producing propylene oxide in which it is recited that the concentration of 2-phenyl-1,2-epoxypropane, an unwanted by-product of the process, is 1 wt. % or less in the reaction mixture after the oxidation step. The oxidation step is the first of the 3 step process which is recited next.

In the first step cumene is oxidized to cumene hydroperoxide.

In the second step the latter is contacted with propylene to cause its epoxidation to propylene oxide with the latter being converted to cumyl alcohol.

In the third step cumyl alcohol is converted to cumene by a "hydrogenation-containing reaction" followed by recycling the cumene to the oxidation step.

This process is conducted commercially.

2-phenyl-1,2-epoxypropane has not been reported as a by-product of said process.

In the claims it is recited that the concentration of the by-product should be limited to less than 1 wt. % in the reaction mixture after the first step oxidation.

However at p. 10, lines 21-24 of the substitute specification it is stated that, "When the

concentration of 1,2-epoxy-2-phenylpropane contained in the oxidation reaction mixture is over 1 % by weight, a reaction yield in the oxidation step deteriorates because amounts of cumyl alcohol and acetophenone formed increase.”

This statement in the specification advises one of ordinary skill in the art that the key to applicants' invention is that the amount of the by-product of the three step process should be limited in the feed to the oxidation step.
